We Moved To Our New Factory

2k Welding is a company that provides services in Welding Technology, Welding Automation and machine manufacturing, which was established in 2004 by expert engineers in their fields. It has been active in the sector from the first moment it was founded, and has gained a rightful place in the sector by completing many projects in a short time. 2k WELDING manufactures at world standards without sacrificing quality with its engineering experience. It produces standard and special design machines that will increase the efficiency and quality of our customers in areas such as maritime, transportation energy, steel construction, production and laying of transport pipelines, wind turbine poles, pressure vessel and tank manufacturing, transformer boiler manufacturing in robotic and conventional fields. By performing service and production in ISO 9001-2008 quality standards, it delivers customer demands above the desired quality as soon as possible. It serves its customers on a 24/7 basis with its qualified, expert and experienced Welding engineers, mechanical engineers, electrical and electronic engineers and blue-collar employees. Since it is established in Adapazari, it can reach all provinces in the Marmara region, where the industry is concentrated, within a few hours. It is the indispensable dream of all manufacturers to improve your current business, to use technological machinery and equipment, to be able to do the work with the same quality and speed without being dependent on the personnel, to save time, which is the most expensive thing, to deliver the works early, to bring the return of faulty products closer to zero, to ensure continuity by creating customer satisfaction. We work and produce with the logic of a partner to make these vital dreams of you come true. We live in such a time that no one chooses the welding profession and it is getting harder to find a welder day by day. It will be an effective way to improve the working environment of welders, to keep existing welders in the profession and to encourage new ones. Camera-controlled semi-automatic systems will keep welders away from bright welding light, welding heat and welding fumes. While semi-automatic welding camera systems are very effective in preventing operator errors and accidents, they increase the welder's observation and vision, prevent visual disturbances, which is the most common occupational disease, and eliminate the difficulties of concentrating on long-term welding. Thus, longer welding seams can be obtained in one go

Common Values:

We are constantly working to become a value-driven company. When we create our values, we refer to the sub-structure of the community we belong to. We shape our way of managing our company according to our values and we take firm steps forward to future with our customers, our dealers, our business partners, our employees and all the groups we are in contact as part of the rules set by our values.

Result Focus and Future :

It is like our company's constitution to be result focus in all our activities. we are supporting our infrastructure factors that will go to result, we are eliminating factors that can not produce results. This our action provides us to secure our future.

Sustainability and Responsibility :

We believe wholeheartedly that is to act responsibly for being beneficial to our company. We are absolutely questioning by considering social effects of what we do and the environmental impact of what we produce without taking action.

Vision & Mission

Continue to provide sustainable benefits to people, the environment and the country's economy with our products which we produce with the understanding of quality life startswith quality cleaning. To provide high quality, easily accessible and sustainable products to all sectors and individual consumers we address.

Our Vison of Quality

Our company produces heavy duty, high performance products for certain sectors as well as concentrate products that it produces. We act with total quality management and continuous R & D principle in all of our works and produce with our philosophy of do best what you do. Our company develops production processes and products based on natural and renewable raw materials with the formulas which it develops in its own laboratories. Our company is acting with the best thought in every work and product, and carries out all its activities with these ideas. Thank you for the interest you showed us and our products.

Contribution to The Country's Economy

2k Welding Technology Machine Mfc.Industry Trade Inc. We are aware that our country's future and interests are more important than our corporate interests. We continue our work with this philosophy. We obtain our duty to contribute to our country's economy as well as our business performance and success in the chemical cleaning products sector we are active in.
